DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance:

the allowability resides on the overall structure of the device as claimed at least in independent claim 1, and at least in part, because of the following:

the prior art to **US/2002/0064051 to Sugimoto et al.** disclose a vehicle lamp and rotary driving apparatus having an optical means whereof the direction of irradiation is changed by rotation, a motor and a rotation transmitting mechanism for transmitting rotation from the motor to output shaft.

However, the instant application recites a motor drive means for controlling a rotation of the motor based on a rotational position of the motor detected by detecting elements, having a rotation-state recognizing means operating such that when any of the plurality of detecting elements is abnormal, the rotation-state recognizing means recognizes a rotational position of the drive motor base on the output signals of the detecting elements and a predetermined angle prediction time computed using a rotational period of the drive motor.

This is not found in the prior art of record therefore the claims are seemed patentable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
